

JALIS MAHAMUD TARIF

Python Backend Developer | Machine Learning Enthusiast

jm.tarif55@gmail.com • +880 1623 708711 • Khilgaon, Dhaka • github.com/jalis55 • linkedin.com/in/jalismsarif

SUMMARY

Backend Developer with 3+ years building and scaling REST APIs and distributed systems in Python, Django & Django REST Framework. Experienced in async/real-time processing (Celery, Redis, WebSockets), SQL performance tuning, and containerized CI/CD deployments. Recently completed a comprehensive Machine Learning course covering classical algorithms (regression, classification, clustering, ensemble methods) and hands-on projects with Scikit-learn, Pandas and NumPy. Track record of cutting backend processing time by 30%+ through query optimization and automation, and of leading feature delivery end-to-end from stakeholder requirements to production.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Leadsoft Bangladesh Limited

01/2025 – 09/2025

Dhaka, Bangladesh

- Cut backend processing time by 30%+ by optimizing SQL queries and replacing manual workflows with automated scripts.
- Led cross-functional teams to resolve complex customer-operations issues, coordinating fixes that kept business-critical systems running with minimal downtime.
- Mentored junior engineers through code reviews and design discussions, raising team-wide adoption of backend best practices.
- Translated stakeholder requirements into technical specs and owned features end-to-end from design through production deployment.

Software Engineer, Leadsoft Bangladesh Limited

06/2023 – 01/2025

- Diagnosed and resolved production issues ahead of deadlines, maintaining smooth operations for client-facing systems.
- Partnered directly with clients to scope new requirements and shipped tailored deployments to meet their needs.
- Wrote SQL scripts to streamline customer-support workflows and speed up issue resolution.

Junior Software Engineer, Leadsoft Bangladesh Limited

09/2022 – 06/2023

- Configured software environments and deployed updates for capital-market clients, resolving SQL database errors to ensure seamless operations.
- Built customized reports that enhanced software functionality and enabled personalized client-side data analysis.
- Performed network troubleshooting (connectivity, DNS, ping/traceroute, router status) to support deployments and resolve infrastructure issues.

Intern, Leadsoft Bangladesh Limited

06/2022 – 08/2022

- Built domain knowledge of capital-market systems while gaining hands-on experience with SQL Server, IIS configuration, and Crystal Reports.

EDUCATION

BSc in Computer Science and Engineering, North South University

2015 – 2020

Dhaka, Bangladesh

TECHNICAL SKILLS

Languages	Python, JavaScript, C, C++
Backend & APIs	Django, Django REST Framework, Flask, REST API Design, JWT & Session Auth
Async & Real-time	Celery, Redis, WebSockets, Django Channels
Databases	PostgreSQL, MySQL, MSSQL, SQL Optimization
DevOps & Tooling	Docker, Docker Hub, GitHub Actions (CI/CD), Git
Frontend	React.js
Testing & Practices	Unit Testing, Code Review, API Design, DSA
Machine Learning	Scikit-learn, Pandas, NumPy, Classical ML (Regression, Classification, Clustering, Ensemble), Feature Engineering, Model Evaluation, Hyperparameter Tuning (GridSearchCV)

PROJECTS

Classical Machine Learning Projects *Python, Scikit-learn, Pandas, NumPy*

- Teen Mental Health Classification & Clustering: built classification models (Logistic Regression, Decision Tree) and KMeans clustering on a teen mental health dataset, tuned with GridSearchCV and addressed class imbalance.
- Student Placement Prediction: end-to-end classification pipeline on a student placement dataset; diagnosed and flagged a data-leakage issue behind a suspiciously high accuracy score.
- UCI Adult Income Prediction: completed a five-part exam covering EDA, preprocessing pipelines, regression, classification, and hyperparameter tuning, debugging pipeline leakage and dataset-specific quirks.
- Linear & Multiple Regression from Scratch: implemented simple linear regression via batch gradient descent (with Z-score normalization) and multiple linear regression via the normal equation, in NumPy, on a housing dataset.

Restaurant Management System *Django REST Framework, React, Django Channels, Redis, PostgreSQL, Docker*

- Full-stack restaurant platform with role-based access (admin, manager, waiter, kitchen); menu, orders, reservations, reporting.
- Real-time order sync via Django Channels + Redis WebSockets with polling fallback; cookie-based JWT auth; Docker Compose for PostgreSQL & Redis.

Backoffice Investment Tracker *Django REST Framework, React.js*

- Full-stack backoffice system to manage and track mutual fund investments on the share market (DRF API + React front end).

E-Commerce Platform *Django, PostgreSQL, Bootstrap, JS*

- Full-stack e-commerce site with product catalog, shopping cart, payment integration; designed relational schema and REST endpoints for checkout.

CERTIFICATIONS

Data Science & Machine Learning with Python — Ostad, Batch-49

- Comprehensive training on classical ML algorithms (regression, classification, clustering, ensemble methods), feature engineering, model evaluation, and practical projects with Scikit-learn, Pandas, and NumPy.
